The cuneco approach to IDM

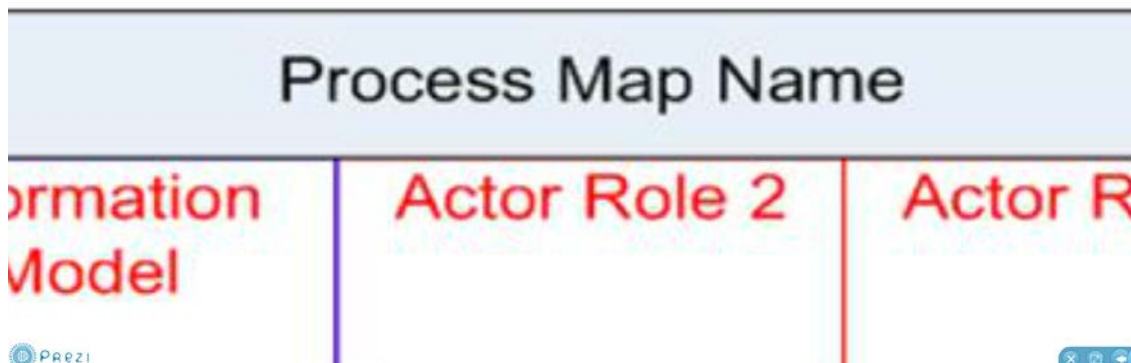

Nordic IDM Meeting
November 3rd 2011

IDM

Processor

- The processes we are going to support are uncovered in cunecos project on user requirements which is finished in december 2011.
- In this project users from all branches of the construction industry has participated in workshops and focus groups.

Actors & Roles

- cuneco is starting a project on the resource domain in November 2011. This project will be defining the actors and roles needed for creating process diagrams as well as building materials, equipment and information

Name	
e 2	Actor Role 1

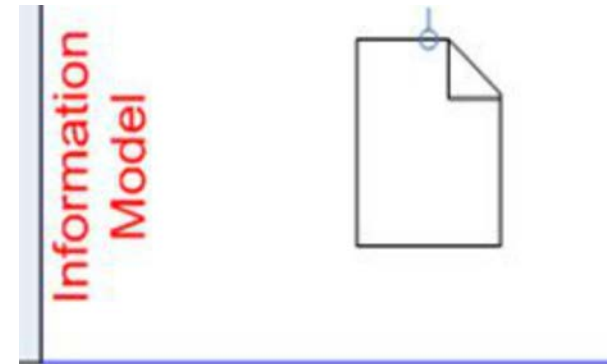

The process domain

- In order to achieve a structured approach to the phases, processes and activities in the lifecycle of the built environment cuneco is starting a project on the process domain this month.

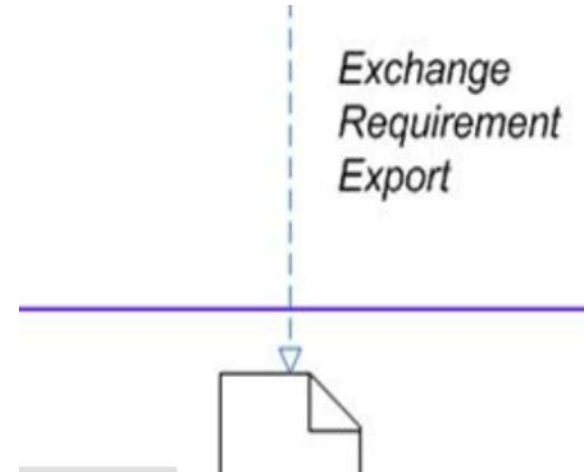

Properties and Classification

- The cuneco projects on properties and classification are aimed at creating a method for referring to objects and properties which is understandable for users and implementable in software.

Information levels

- The ongoing project on 'information levels' is similar to the Level of Development-approach in the US. This project focuses on determining which information is exchanged in each process.

The cuneco approach

- The cuneco approach to IDM is to establish a framework for all the bits and pieces which makes up an IDM.
- Even though we aim at delivering a number of IDM's we are certain that we are just going to cover a small fraction of the total number of relevant IDM 's.
